Title: Aquatic Vertebrate Population Study in Mack Creek, Andrews Experimental Forest, 1987 to present

Abstract:

Populations of Coastal Cutthroat trout (Onchorhyncus clarkii clarkii) in two standard reaches of Mack Creek in the H.J. Andrews Experimental Forest have been monitored since 1987. Monitoring of Coastal Giant Salamanders, Dicamptodon tenebrosus began in 1993. The two standard reaches are in a section of clearcut forest (ca. 1963) and an upstream 500 year old coniferous forest. Sub-reaches are sampled with 2-pass electrofishing, and all captured vertebrates are measured and weighed. Additionally, a set of channel measurements are taken with each sampling. This study constitutes one of the longest continuous records of salmonid populations on record.

Keywords: Amphibians; Animal populations; Aquatic habitats; Biomass; Demography; Disturbance; Ecology; Fish; Fish habitat; Fish populations; Floods; Herpefauna; Population dynamics; Resistance and resilience; Stream ecology; Streams; Timber harvesting; Trout; Vertebrates; Populations; Habitats; Populations; demography; ecology; stream ecology; population dynamics; floods; biomass; resistance and resilience; disturbance; timber harvest; aquatic ecosystems; streams; animals; vertebrates; amphibians; fishes; trout; reptiles;

Date data commenced: 1987-10-06
Date data terminated: 2019-09-05
Principal Investigator: Ivan Arismendi

List of Entities:
1. Vertebrate numbers and size
2. Habitat dimensions

DEPTH7
  Depth 3 along width2 transect

DEPTH8
  Maximum depth along width2 transect

DEPTH9
  Depth 1 along width3 transect

ENTITY
  Entity number

LENGTH
  Channel unit length

LENGTH1
  Length type 1 (total or snout-fork length for Onchorhyncus, snout-vent for Dicamptodon). See supplemental information in metadata.

LENGTH2
  Length type 2 (Dicamptodon only--snout-tail)

MAXDEPTH
  Maximum depth channel unit

NOTES
  Comments

PASS
  Electoshocking pass number

PITNUMBER
  Unique pit tag number; tag is embedded in vertibrate. Began in 2007.

REACH
  Reach sampled (in 50 m distances)

SAMPLEDATE
  Date sampled

SECTION
Location of sampling section

SITECODE
Coded name of sample area

SPECIES
Vertebrate species sampled

UNITNUM
Channel unit number (sequential)

UNITTYPE
Channel unit classification type

VERT_INDEX
Unique numerical index of vertibrates measured (for creating key field)

WEIGHT
Weight of individual organism (not taken after 1999)

WIDTH1
Wetted width of channel unit -- transect 1

WIDTH2
Wetted width of channel unit -- transect 2

WIDTH3
Wetted width of channel unit -- transect 3

WIDTH4
Wetted width of channel unit - transect 4

WIDTH5
Wetted width of channel unit - transect 5

YEAR
Year of Survey
