Title: Stream chemistry concentrations and fluxes using proportional sampling in the Andrews Experimental Forest, 1968 to present

Abstract:

Stream chemistry sampling and analysis was initiated at the H.J. Andrews Experimental Forest in 1968 in two small watersheds (Watersheds 9, 10). Sampling has expanded as additional paired watershed studies (Watersheds 1, 2, 6, 7, 8) and monitoring (Mack, Lookout Cr) were initiated over time. Water samples are collected proportionally to streamflow as a function of stage height and composited at each stream gauging site. Composite sample periods are generally three weeks and 3 one-week samples are commonly composited in the lab before analysis. Water samples are analyzed at the Cooperative Chemical Analytical Lab (CCAL) (http://www.ccal.oregonstate.edu/). Concentrations of analytes include dissolved and particulate nitrogen, phosphorus, carbon, as well pH, conductivity, suspended sediment, and full suite of cations and anions. Monthly and annual mean concentrations are calculated by weighting 3-week periods by streamflow. Fluxes are calculated using concentrations and flow. The original objective was to examine the nutrient budgets for small watersheds and to evaluate changes in average concentrations and fluxes following timber harvest in comparison with unharvested reference watersheds. This study is conducted in conjunction with Andrew’s precipitation chemistry (CP002) and the U.S. National Atmospheric Deposition Program (NADP).

Keywords: Discharge; Dissolved load; Hydrology; Water; Logging; Long-Term Ecological Research (LTER); Nutrients; Solution transport; Streamflow; Timber harvesting; Water; Water chemistry; Inorganic nutrients; Inorganic nutrients; Organic matter; Long-Term Ecological Research (LTER); hydrology; water chemistry; suspended solids; discharge; streamflow; timber harvest; inorganic nutrients; nutrients; dissolved nutrients; water;

Date data commenced: 1968-10-02
Date data terminated: 2019-05-22

Principal Investigator: Sherri L. Johnson

List of Entities:
1. Proportional stream water sample nutrient concentrations
2. Stream water nutrient mean monthly concentrations
3. Stream water nutrient mean annual concentrations
4. Stream water nutrient monthly outflow (kg/ha)
5. Stream water nutrient outflow (kg/ha) for each proportional sampling interval
6. Stream water sample log sheet: field and laboratory comments

**1. Proportional stream water sample nutrient concentrations**

This is the raw proportional sample concentration data collected periodically (usually every three weeks). Please see mean monthly concentration data provided in entity 2.

5. Stream water nutrient outflow (kg/ha) for each proportional sampling interval

Data are calculated outflow fluxes for each proportional sample period. Alternatively, please consider use of monthly outflow fluxes provided in entity 4.

**Attribute List:**

Attributes Definitions:

ALK
Alkalinity as calcium carbonate (CaCO3); method: electrometric titration to pH 4.5; all data is converted from the formerly used units of bicarbonate carbon (HCO3-C)

ALK_MO
Mean monthly alkalinity concentration as CaCO3 (calcium carbonate)

ALK_OUT_MO
Total monthly alkalinity outflow as CaCO3 (calcium carbonate). All units are now converted from HCO3-C (bi-carbonate)

ALK_OUTPUT
Alkalinity outflow as CaCO3 (calcium carbonate)

ALK_YR
Mean annual alkalinity concentration as CaCO3 (calcium carbonate). All units are now converted from HCO3-C (bi-carbonate)

**ALKCODE**

Alkalinity value qualifier code

**ALKCODE_MO**

Monthly alkalinity qualifier value code

**ALKCODE_YR**

Annual alkalinity qualifier value code

**ANCA**

Anion-cation ratio: micro equivalence ratio of anions to cations by calculation - provided only as an analytical check. Requires anions: ALK, SO4S, CL, NO3N, PO4P; cations: pH, Na, K, Ca, Mg, NH4N

**ANCACODE**

Anion-cation ratio qualifier code

**CA**

Ca, dissolved calcium (filtrable) concentration; method flame atomic absorption spectroscopy

**CA_MO**

Mean monthly calcium concentration

**CA_OUT_MO**

Total monthly calcium outflow

**CA_OUTPUT**

Calcium outflow

**CA_YR**

Mean annual calcium concentration

**CACODE**

Ca value qualifier code

**CACODE_MO**

Monthly calcium value qualifier code

**CACODE_YR**

Annual Ca value qualifier code

**CL**

Chloride (dissolved) concentration; method: ion chromatography (automated ferric thiocyanate before 1993)

**CL_MO**

Mean monthly chloride concentration

**CL_OUT_MO**

Total monthly chloride outflow

**CL_OUTPUT**

Chloride outflow

**CL_YR**

Mean annual chloride concentration
Dissolved organic nitrogen - not measured analytically; mathematically determined by subtracting NH3-N and NO3-N from Total dissolved nitrogen. Values before May 2005 are determined by TKN minus NH3-N.

DON_MO
Mean monthly dissolved organic N concentration - not measured analytically; mathematically determined by subtracting NH3-N and NO3-N from Total dissolved nitrogen. Values before May 2005 are determined by TKN minus NH3-N

DON_OUT_MO
Total monthly dissolved organic N outflow - not measured analytically; mathematically determined by subtracting NH3-N and NO3-N from Total dissolved nitrogen. Values before May 2005 are determined by TKN minus NH3-N

DON_OUTPUT
Dissolved organic N outflow - not measured analytically; mathematically determined by subtracting NH3-N and NO3-N from Total dissolved nitrogen. Values before May 2005 are determined by TKN minus NH3-N

DON_YR
Mean annual dissolved organic N concentration - not measured analytically; mathematically determined by subtracting NH3-N and NO3-N from Total dissolved nitrogen. Values before May 2005 are determined by TKN minus NH3-N

DONCODE
Dissolved organic nitrogen value qualifier code

DONCODE_MO
Monthly dissolved organic N value qualifier code

DONCODE_YR
Annual dissolved organic N value qualifier code

ENTITY
Entity number

FIELD_COMMENTS
Field comments related to the collection of the water sample

INTERVAL
Proportional sampling interval length in days

K
K, dissolved potassium (filtrable) concentration; method flame atomic absorption spectroscopy

K_MO
Mean monthly potassium concentration

K_OUT_MO
Total monthly potassium outflow

K_OUTPUT
Potassium outflow

K_YR
Mean annual potassium concentration

KCODE
K value qualifier code

KCODE_MO

Monthly potassium value qualifier code

KCODE_YR

Annual K value qualifier code

LAB_COMMENTS

Laboratory comments related to the handling and analyses of the sample

LABNO

Lab number code for sample

LOW_VOLUME

Indicator of a low volume sampler that may restrict the breadth of laboratory analyses

MEAN_LPS

Mean discharge over the sampling interval

MG

Mg, dissolved magnesium (filtrable) concentration; method flame atomic absorption spectroscopy

MG_MO

Mean monthly magnesium concentration

MG_OUT_MO

Total monthly magnesium outflow

MG_OUTPUT

Magnesium outflow

MG_YR

Mean annual magnesium concentration

MGCODE

Mg value qualifier code

MGCODE_MO

Monthly magnesium value qualifier code

MGCODE_YR

Annual Mg value qualifier code

MONTH

Month of summary

NA

Na, dissolved sodium (filtrable) concentration; method flame atomic absorption spectroscopy

NA_MO

Mean monthly sodium concentration

NA_OUT_MO

Total monthly sodium outflow

NA_OUTPUT

Sodium outflow
NA_YR
  Mean annual sodium concentration

NACODE
  Na value qualifier code

NACODE_MO
  Monthly sodium value qualifier code

NACODE_YR
  Annual Na value qualifier code

NH3N
  Ammonia-nitrogen (NH3-N) concentration, ammonia as nitrogen; method: automated phenate

NH3N_MO
  Mean monthly ammonia-nitrogen (NH3-N) concentration

NH3N_OUT_MO
  Total monthly ammonia-nitrogen (NH3-N) outflow

NH3N_OUTPUT
  Ammonia-nitrogen (NH3-N) outflow

NH3N_YR
  Mean annual ammonia (NH3-N) concentration

NH3NCODE
  NH3-N value qualifier code

NH3NCODE_MO
  Monthly ammonia-nitrogen (NH3-N) value qualifier code

NH3NCODE_YR
  Annual NH3-N value qualifier code

NO3N
  Nitrate-nitrogen (NO3-N), nitrate + nitrite as nitrogen concentration; method: automated cadmium reduction

NO3N_MO
  Mean monthly nitrate-nitrogen (NO3-N) concentration

NO3N_OUT_MO
  Total monthly nitrate-nitrogen (NO3-N) outflow

NO3N_OUTPUT
  Nitrate-nitrogen (NO3-N) outflow

NO3N_YR
  Mean annual nitrate-nitrogen (NO3-N) concentration

NO3NCODE
  NO3-N value qualifier code

NO3NCODE_MO
Monthly nitrate-nitrogen (NO3-N) value qualifier code

NO3NCODE_YR

Annual NO3-N value qualifier code

PARTN

Particulate N, also known as total suspended nitrogen - not measured analytically; mathematically determined by subtraction of Total dissolved nitrogen (TDN) from Unfiltered Total nitrogen (UTN). Values before May 2005 are determined by UTKN minus TKN.

PARTN_MO

Mean monthly particulate N concentration - not measured analytically; mathematically determined by subtraction of Total dissolved nitrogen (TDN) from Unfiltered Total nitrogen (UTN). Values before May 2005 are determined by UTKN minus TKN.

PARTN_OUT_MO

Total monthly particulate N outflow - not measured analytically; mathematically determined by subtraction of Total dissolved nitrogen (TDN) from Unfiltered Total nitrogen (UTN). Values before May 2005 are determined by UTKN minus TKN.

PARTN_OUTPUT

Particulate N outflow - not measured analytically; mathematically determined by subtraction of Total dissolved nitrogen (TDN) from Unfiltered Total nitrogen (UTN). Values before May 2005 are determined by UTKN minus TKN.

PARTN_YR

Mean annual particulate N concentration - not measured analytically; mathematically determined by subtraction of Total dissolved nitrogen (TDN) from Unfiltered Total nitrogen (UTN). Values before May 2005 are determined by UTKN minus TKN.

PARTNCODE

Particulate N value qualifier code

PARTNCODE_MO

Monthly particulate N value qualifier code

PARTNCODE_YR

Annual particulate N value qualifier code

PARTP

Particulate P, also known as total suspended phosphorus - not measured analytically; mathematically determined by subtraction of Total Dissolved P (TDP) from Unfiltered Total P (UTP)

PARTP_MO

Mean monthly particulate P - not measured analytically; mathematically determined by subtraction of Total Dissolved P (TDP) from Unfiltered Total P (UTP)

PARTP_OUT_MO

Total monthly particulate P outflow - not measured analytically; mathematically determined by subtraction of Total Dissolved P (TDP) from Unfiltered Total P (UTP)

PARTP_OUTPUT

Particulate P outflow - not measured analytically; mathematically determined by subtraction of Total Dissolved P (TDP) from Unfiltered Total P (UTP)

PARTP_YR

Mean annual particulate P - not measured analytically; mathematically determined by subtraction of Total Dissolved P (TDP) from Unfiltered Total P (UTP)

PARTPCODE

Particulate P value qualifier code

PARTPCODE_MO
Monthly particulate P value qualifier code
PARTPCODE_YR

Annual particulate P value qualifier code
PH
pH (hydrogen concentration); method: glass electrode
PH_MO
Mean monthly pH
PH_YR
Mean annual pH
PHCODE
pH value qualifier code
PHCODE_MO
Monthly pH value qualifier code
PHCODE_YR
Annual pH value qualifier code
PO4P
Ortho phosphorus concentration, soluble reactive phosphorus, phosphate (PO4-P); method: ascorbic acid finish
PO4P_MO
Mean monthly ortho phosphorus (PO4-P) concentration
PO4P_OUT_MO
Total monthly ortho phosphorus (PO4-P) outflow
PO4P_OUTPUT
Ortho phosphorus (PO4-P) outflow
PO4P_YR
Mean annual ortho phosphorus (PO4-P) concentration
PO4PCODE
Ortho phosphorus value qualifier code
PO4PCODE_MO
Monthly ortho phosphorus (PO4-P) value qualifier code
PO4PCODE_YR
Annual ortho phosphorus value qualifier code
PVOL
Sample volume from streamflow porportional sampler
PVOLCODE
Sample volume code
Q_AREA_CM
Streamflow in cm for the time interval represented by the proportional sample
Q_AREA_MO
  Total monthly streamflow over watershed area
Q_AREA_YR
  Total annual streamflow for the wateryear
QA_SAMPLE
  Quality assurance sample number assigned if sample water is further analyzed for internal laboratory purposes
QCCODE
  Quality control sample codes are assigned to samples collected for examining integrity of proportional sample analysis
QCODE
  Streamflow value qualifier code
QCODE_MO
  Monthly streamflow value qualifier code
QCODE_YR
  Annual streamflow value qualifier code
SAMPLER_TYPE
  Type of water sampler or method used to collect water
SEQ_INDEX
  Sequential index generated primarily by the temporal order in which samples are collected
SI
  Silica as silicon concentration; method: automated molybdenum blue
SI_MO
  Mean monthly silica concentration
SI_OUT_MO
  Total monthly silica outflow
SI_OUTPUT
  Silica outflow
SI_YR
  Mean annual silica concentration
SICODE
  Silica value qualifier code
SICODE_MO
  Monthly silica value qualifier code
SICODE_YR
  Annual silica value qualifier code
SITECODE
  Gaging station site code
SO4S
SO4-S (dissolved) concentration, sulfate as sulfur; method ion chromatography (automated barium sulfate before 1993)

SO4S_MO
Mean monthly sulfate-sulfur (SO4-S) concentration

SO4S_OUT_MO
Total monthly sulfate-sulfur (SO4-S) outflow

SO4S_OUTPUT
SO4-S (sulfate-sulfur) outflow

SO4S_YR
Mean annual SO4-S (sulfate-sulfur) concentration

SO4SCODE
SO4-S value qualifier code

SO4SCODE_MO
Monthly sulfate-sulfur (SO4-S) value qualifier code

SO4SCODE_YR
Annual SO4-S value qualifier code

SSED
Suspended sediment concentration; method: nonfiltrable residue, gravimetric

SSED_MO
Mean monthly suspended sediment concentration

SSED_OUT_MO
Total monthly suspended sediment outflow

SSED_OUTPUT
Suspended sediment outflow

SSED_YR
Mean annual suspended sediment concentration

SSEDCODE
Suspended sediment value qualifier code

SSEDCODE_MO
Monthly suspended sediment value qualifier code

SSEDCODE_YR
Annual suspended sediment value qualifier code

STCODE
Study code

TDN
Total dissolved nitrogen concentration (filtered sample); method: persulfate digestion and analysis by automated colorimetric analysis; instrument: Technicon Auto-Analyzer II

TDN_MO
Mean monthly total dissolved nitrogen concentration
TDN_OUT_MO
Total monthly total dissolved nitrogen outflow (filtered sample)

TDN_OUTPUT
Total dissolved nitrogen outflow (filtered sample)

TDN_YR
Mean annual total dissolved nitrogen concentration

TDNCODE
Total dissolved nitrogen value qualifier code

TDNCODE_MO
Monthly total dissolved nitrogen value qualifier code

TDNCODE_YR
Annual total dissolved nitrogen value qualifier code

TDP
Total dissolved phosphorus concentration; method: persulfate/H2SO4 digestion, ascorbic acid finish

TDP_MO
Mean monthly total dissolved phosphorus concentration

TDP_OUT_MO
Total monthly total dissolved phosphorus outflow

TDP_OUTPUT
Total dissolved phosphorus outflow

TDP_YR
Mean annual total dissolved phosphorus concentration

TDPCODE
Total dissolved phosphorus value qualifier code

TDPCODE_MO
Monthly total dissolved phosphorus value qualifier code

TDPCODE_YR
Annual total dissolved phosphorus value qualifier code

TKN
Total Kjeldahl nitrogen concentration on filtered sample (dissolved); method: Kjeldahl digestion H2SO4, CuSO4/KCl, nessler finish

TKN_MO
Mean monthly total kjeldahl nitrogen concentration (dissolved)

TKN_OUT_MO
Total monthly total Kjeldahl nitrogen (dissolved) outflow

TKN_OUTPUT
Total Kjeldahl nitrogen (dissolved) outflow

TKN_YR
Mean annual total kjeldahl nitrogen concentration (dissolved)

TKN

TKN_CODE
Total Kjeldahl nitrogen value qualifier code

TKN_CODE_MO
Monthly total Kjeldahl nitrogen (dissolved) value qualifier code

TKN_CODE_YR
Annual total Kjeldahl nitrogen value qualifier code

TYPE
Sample type indicator

UTKN
Total Kjeldahl nitrogen concentration on unfiltered sample; method: Kjeldahl digestion H2SO4, CuSO4/KCl, nessler finish

UTKN_MO
Mean monthly unfiltered total Kjeldahl nitrogen concentration

UTKN_OUT_MO
Total monthly unfiltered total Kjeldahl nitrogen outflow

UTKN_OUTPUT
Unfiltered total Kjeldahl nitrogen outflow

UTKN_YR
Mean annual unfiltered total Kjeldahl nitrogen concentration

UTKN_CODE
Unfiltered total Kjeldahl nitrogen value qualifier code

UTKN_CODE_MO
Monthly unfiltered total Kjeldahl nitrogen value qualifier code

UTKN_CODE_YR
Annual unfiltered total Kjeldahl nitrogen value qualifier code

UTN
Total nitrogen concentration (unfiltered sample); method: persulfate digestion and analysis by automated colorimetric analysis; instrument: Technicon Auto-Analyzer II

UTN_MO
Mean monthly total nitrogen concentration (unfiltered samples)

UTN_OUT_MO
Total monthly total nitrogen outflow (unfiltered sample)

UTN_OUTPUT
Total nitrogen outflow (unfiltered sample)

UTN_YR
Mean annual total nitrogen concentration (unfiltered samples)

UTN_CODE
Unfiltered total nitrogen value qualifier code
UTNCODE_MO
  Monthly unfiltered total nitrogen value qualifier code

UTNCODE_YR
  Annual unfiltered total nitrogen value qualifier code

UTP
  Unfiltered total phosphorus concentration; method: persulfate/H2SO4 digestion, ascorbic acid finish

UTP_MO
  Mean monthly unfiltered total phosphorus concentration

UTP_OUT_MO
  Total monthly unfiltered total phosphorus outflow

UTP_OUTPUT
  Unfiltered total phosphorus outflow

UTP_YR
  Mean annual unfiltered total phosphorus concentration

UTPCODE
  Unfiltered total phosphorus value qualifier code

UTPCODE_MO
  Monthly unfiltered total phosphorus value qualifier code

UTPCODE_YR
  Annual unfiltered total phosphorus value qualifier code

WATERYEAR
  Water year of sample or annual summary (October-September)

YEAR
  Calendar year of annual or monthly summary

Enumerated Domains:

Enumerated Domain for Attribute: ALKCODE
  *  Value is below detection limit for analysis (used beginning in 1991)
  A  Accepted value
  E  Estimated value
  N  No analytical measurement
  Q  Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: ANCACODE
  D  Derived anion-cation ratio value is based on the full set of anions and cations
  N  No anion-cation ratio calculation determined due to missing analytical components
  D*  Derived value - mathematically determined from other analytical measurements, one or more of which were below the detection limit
  DE  Derived value - mathematically determined from other analytical measurements, one or more of which were estimated values
  DQ  Derived value - mathematically determined from other analytical measurements,
one or more of which were questionable values

Enumerated Domain for Attribute: CACODE
*  Value is below detection limit for analysis (used beginning in 1991)
 A  Accepted value
 E  Estimated value
 N  No analytical measurement
 Q  Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: CLCODE
*  Value is below detection limit for analysis (used beginning in 1991)
 A  Accepted value
 E  Estimated value
 N  No analytical measurement
 Q  Value is questionable (used beginning in 1991)
 C  Value confirmed, contamination or experimental tracer suspected (code use begins May 2007)

Enumerated Domain for Attribute: COND CODE
*  Value is below detection limit for analysis (used beginning in 1991)
 A  Accepted value
 E  Estimated value
 N  No analytical measurement
 Q  Value is questionable (used beginning in 1991)
 C  Confirmed value, contamination or experimental tracer suspected (code use begins May 2007)

Enumerated Domain for Attribute: DOCCODE
*  Value is below detection limit for analysis (used beginning in 1991)
 A  Accepted value
 E  Estimated value
 N  No analytical measurement
 Q  Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: KCODE
*  Value is below detection limit for analysis (used beginning in 1991)
 A  Accepted value
 E  Estimated value
 N  No analytical measurement
 Q  Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: MGCODE
*  Value is below detection limit for analysis (used beginning in 1991)
A: Accepted value
E: Estimated value
N: No analytical measurement
Q: Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: NACODE
* Value is below detection limit for analysis (used beginning in 1991)
  A: Accepted value
  E: Estimated value
  N: No analytical measurement
  Q: Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: NH3NCODE
* Value is below detection limit for analysis (used beginning in 1991)
  A: Accepted value
  E: Estimated value
  N: No analytical measurement
  Q: Value is questionable (used beginning in 1991)
  C: Value confirmed, contamination suspected (code use begins May 2007)

Enumerated Domain for Attribute: NO3NCODE
* Value is below detection limit for analysis (used beginning in 1991)
  A: Accepted value
  E: Estimated value
  N: No analytical measurement
  Q: Value is questionable (used beginning in 1991)
  C: Value confirmed, contamination suspected (code use begins May 2011)

Enumerated Domain for Attribute: PO4PCODE
* Value is below detection limit for analysis (used beginning in 1991)
  A: Accepted value
  E: Estimated value
  N: No analytical measurement
  Q: Value is questionable (used beginning in 1991)
  C: Value confirmed, contamination suspected (code use begins May 2011)

Enumerated Domain for Attribute: DONCODE
N: No derived value is calculated due to missing analytical components
D: Derived value - mathematically determined from other analytical measurements
D* Derived value - mathematically determined from other analytical measurements, one or more of which were below the detection limit
DE Derived value - mathematically determined from other analytical measurements, one or more of which were estimated values
DQ Derived value - mathematically determined from other analytical measurements, one or more of which were questionable values
DC Derived value confirmed, contamination suspected (code use begins May 2007)

Enumerated Domain for Attribute: PHCODE
A Accepted value
E Estimated value
N No analytical measurement
Q Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: PARTNCODE
N No derived value is calculated due to missing analytical components
D Derived value - mathematically determined from other analytical measurements
D* Derived value - mathematically determined from other analytical measurements, one or more of which were below the detection limit
DE Derived value - mathematically determined from other analytical measurements, one or more of which were estimated values
DQ Derived value - mathematically determined from other analytical measurements, one or more of which were questionable values
DC Derived value confirmed, contamination suspected (code use begins May 2007)

Enumerated Domain for Attribute: PARTPCODE
N No derived value is calculated due to missing analytical components
D Derived value - mathematically determined from other analytical measurements
D* Derived value - mathematically determined from other analytical measurements, one or more of which were below the detection limit
DE Derived value - mathematically determined from other analytical measurements, one or more of which were estimated values
DQ Derived value - mathematically determined from other analytical measurements, one or more of which were questionable values
DC Derived value confirmed, contamination suspected (code use begins May 2007)

Enumerated Domain for Attribute: PVOLCODE
A Accepted value for sample volume
E Sample volume value is estimated
Q Sample volume value is questionable - typically implies volume is measured correctly, but volume does not proportionally represent the collection period
N No sample volume value available

Enumerated Domain for Attribute: QCODE
A Accepted value for streamflow
N No streamflow available for period
E Estimated streamflow value
P Provisional streamflow value is likely to change - used for USGS Lookout Creek streamflow
Q Streamflow value for the period is questionable

Enumerated Domain for Attribute: SICODE
* Value is below detection limit for analysis (used beginning in 1991)
Enumerated Domain for Attribute: SO4SCODE

* Value is below detection limit for analysis (used beginning in 1991)

A Accepted value
E Estimated value
N No analytical measurement
Q Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: SSEDCODE

A Accepted value
E Estimated value
N No analytical measurement
Q Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: STCODE

CF002 Study code CF002

Enumerated Domain for Attribute: TKNCODE

* Value is below detection limit for analysis (used beginning in 1991)

A Accepted value
E Estimated value
N No analytical measurement
Q Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: TDPCODE

* Value is below detection limit for analysis (used beginning in 1991)

A Accepted value
E Estimated value
N No analytical measurement
Q Value is questionable (used beginning in 1991)
C Value confirmed, contamination suspected (code use begins May 2011)

Enumerated Domain for Attribute: TYPE

QB Quality control samples taken below turbulence box
QS Quality control sample taken through sampler
QL Quality control sample taken through sampler and left in gage house until next collection
QA Quality control sample taken above flume
C Sample combined with preceding saved sample(s) for analysis - not used after 1981
G Grab sample taken in lieu of proportional sample
S Sample saved to combine with following collection (type 'C') due to insufficient water (not used after 1981). Nutrient concentrations of the following stream water sample are used to determine fluxes for this period.
N No sample is collected for this period
F Complete, full sample. Sampler operational throughout sampling period.
YE Year end marker allows summary by water year - this is not a sample. Flux values are calculated from streamflow ending Sep 30 and use analyte concentrations from the following sample. 'Y' markers are inserted every Sep30
A Augmented sample - grab sample added to insufficient proportional sample (rarely used after 1987)
P Partial sample - proportional sampler did not operate successfully over entire period
B Biased sample - consecutive samples are proportionally separated and combined based on streamflow - code use begins WY 2008 to approx. two 3-week sampling intervals (where one sample is for 4 wks and the next for 2 wks)

Enumerated Domain for Attribute: UTKNCODE
* Value is below detection limit for analysis (used beginning in 1991)
A Accepted value
E Estimated value
N No analytical measurement
Q Value is questionable (used beginning in 1991)

Enumerated Domain for Attribute: UTPCODE
* Value is below detection limit for analysis (used beginning in 1991)
A Accepted value
E Estimated value
N No analytical measurement
Q Value is questionable (used beginning in 1991)
C Value confirmed, contamination suspected (code use begins May 2011)

Enumerated Domain for Attribute: UTNCODE
* Value is below detection limit for analysis (used beginning in 1991)
A Accepted value
E Estimated value
Q Value is questionable (used beginning in 1991)
D Derived value - mathematically determined from other analytical measurements
D* Derived value - mathematically determined from other analytical measurements, one or more of which were below the detection limit
DE Derived value - mathematically determined from other analytical measurements, one or more of which were estimated values
DQ Derived value - mathematically determined from other analytical measurements, one or more of which were questionable values
N No analytical measurement or no derived value calculated due to missing analytical components

Enumerated Domain for Attribute: STCODE
CF002 Study code CF002

Enumerated Domain for Attribute: TYPE
QB Quality control samples taken below turbulence box
QS Quality control sample taken through sampler
QL Quality control sample taken through sampler and left in gage house until next collection
QA Quality control sample taken above flume
C  Sample combined with preceeding saved sample(s) for analysis - not used after 1981
G  Grab sample taken in lieu of proportional sample
S  Sample saved to combine with following collection (type 'C') due to insufficient water (not used after 1981). Nutrient concentrations of the following stream water sample are used to determine fluxes for this period.
N  No sample is collected for this period
F  Complete, full sample. Sampler operational throughout sampling period.
YE Year end marker allows summary by water year - this is not a sample. Flux values are calculated from streamflow ending Sep 30 and use analyte concentrations from the following sample. 'Y' markers are inserted every Sep30
A Augmented sample - grab sample added to insufficient proportional sample (rarely used after 1987)
P Partial sample - proportional sampler did not operate successfully over entire period
B Biased sample - consecutive samples are proportionally separated and combined based on streamflow - code use begins WY 2008 to approx. two 3-week sampling intervals (where one sample is for 4 wks and the next for 2 wks)

- **C**  Sample combined with preceeding saved sample(s) for analysis - not used after 1981
- **G**  Grab sample taken in lieu of proportional sample
- **S**  Sample saved to combine with following collection (type 'C') due to insufficient water (not used after 1981). Nutrient concentrations of the following stream water sample are used to determine fluxes for this period.
- **N**  No sample is collected for this period
- **F**  Complete, full sample. Sampler operational throughout sampling period.
- **YE**  Year end marker allows summary by water year - this is not a sample. Flux values are calculated from streamflow ending Sep 30 and use analyte concentrations from the following sample. “Y” markers are inserted every Sep30
- **A**  Augmented sample - grab sample added to insufficient proportional sample (rarely used after 1987)
- **P**  Partial sample - proportional sampler did not operate successfully over entire period
- **B**  Biased sample - consecutive samples are proportionally separated and combined based on streamflow - code use begins WY 2008 to approx. two 3-week sampling intervals (where one sample is for 4 wks and the next for 2 wks)

Enumerated Domain for Attribute: **UTKNCODE**
- *  Value is below detection limit for analysis (used beginning in 1991)

Enumerated Domain for Attribute: **UTPCODE**
- * Value is below detection limit for analysis (used beginning in 1991)
- A Accepted value
- E Estimated value
- N No analytical measurement
- Q Value is questionable (used beginning in 1991)
- C Value confirmed, contamination suspected (code use begins May 2011)

Enumerated Domain for Attribute: **UTNCODE**
- * Value is below detection limit for analysis (used beginning in 1991)
- A Accepted value
- E Estimated value
- Q Value is questionable (used beginning in 1991)
- D Derived value - mathematically determined from other analytical measurements
- D* Derived value - mathematically determined from other analytical measurements, one or more of which were below the detection limit
- DE Derived value - mathematically determined from other analytical measurements, one or more of which were estimated values
- DQ Derived value - mathematically determined from other analytical measurements, one or more of which were questionable values
- N No analytical measurement or no derived value calculated due to missing analytical components
- C Value confirmed, contamination suspected (code use begins May 2011)

Enumerated Domain for Attribute: **TDNCODE**
- * Value is below detection limit for analysis (used beginning in 1991)
- A Accepted value
- E Estimated value
- Q Value is questionable (used beginning in 1991)
- D Derived value - mathematically determined from other analytical measurements
- D* Derived value - mathematically determined from other analytical measurements, one or more of which were below the detection limit
- DE Derived value - mathematically determined from other analytical measurements, one or more of which were estimated values
- DQ Derived value - mathematically determined from other analytical measurements, one or more of which were questionable values
- N No analytical measurement or no derived value calculated due to missing analytical components
- C Value confirmed, contamination suspected (code use begins May 2007)

Enumerated Domain for Attribute: **STCODE**
Enumerated Domain for Attribute: TYPE

- QB: Quality control samples taken below turbulence box
- QS: Quality control sample taken through sampler
- QL: Quality control sample taken through sampler and left in gage house until next collection
- QA: Quality control sample taken above flume
- C: Sample combined with preceding saved sample(s) for analysis - not used after 1981
- G: Grab sample taken in lieu of proportional sample
- S: Sample saved to combine with following collection (type 'C') due to insufficient water (not used after 1981). Nutrient concentrations of the following stream water sample are used to determine fluxes for this period.
- N: No sample is collected for this period
- F: Complete, full sample. Sampler operational throughout sampling period.
- YE: Year end marker allows summary by water year - this is not a sample. Flux values are calculated from streamflow ending Sep 30 and use analyte concentrations from the following sample. "Y" markers are inserted every Sep30
- A: Augmented sample - grab sample added to insufficient proportional sample (rarely used after 1987)
- P: Partial sample - proportional sampler did not operate successfully over entire period
- B: Biased sample - consecutive samples are proportionally separated and combined based on streamflow - code use begins WY 2008 to approx. two 3-week sampling intervals (where one sample is for 4 wks and the next for 2 wks)

Enumerated Domain for Attribute: QCCODE

- NA: Water sample is not a quality control sample
- QA: Quality control water sample taken above the flume
- QB: Quality control water sample taken below the turbulence box
- QL: Quality control water sample taken through the sampler and left in the gage house until the next collection
- QS: Quality control water sample taken through the sampler
- QZ: Additional or miscellaneous quality control water sample

Enumerated Domain for Attribute: SAMPLER_TYPE

- GR: Grab sample taken manually from the flume
- RI: Instantaneous sample collected through the battery-powered proportional water sampler
- RM: Proportional water sample taken through the battery-powered proportional water sampler with reed switch assembly and mechanical timer
- RS: Proportional water sample taken through the battery-powered proportional water sampler with reed switch assembly and solid state time and circuit board
- SG: Proportional water sample taken through Sigma sampler with timing controlled by a Campbell Scientific data logger
- SI: Instantaneous water sample taken through Sigma sampler

Enumerated Domain for Attribute: LOW_VOLUME

- N: Sample is of sufficient volume for laboratory analyses
- Y: Sample is low volume and laboratory analyses may be limited
