Title: Dendrochronology study of fire history, Andrews Experimental Forest and central western Cascades, Oregon, 1482-1952

Abstract:

Fire history is documented for an 11,000 hectare (27,110 acre) area in the western Oregon Cascades, including H. J. Andrews Experimental Forest. Fire scar and tree origin data were collected mainly from stumps at 359 sites. Thirty-five fire events are mapped from 1482 to 1952. Mean fire return intervals are derived from data at individual sites, about 5 hectares in size, rather than from the corrected master fire chronology.

Keywords: Dendrochronology; Disturbance; Fire; Fire history; Fire regimes; Long-Term Ecological Research (LTER); Disturbance; Long-Term Ecological Research (LTER); history; dendrochronology; fires; disturbance; fire history;

Date data commenced: 1984-01-10

Date data terminated: 1987-08-31

YEAR Y N numeric(4,0) range 1435.0000 1935.0000 YYYY
FIRE_HISTORY N N char(1) enum

Attributes Definitions:

AGE_CLASS_COUNT
Number of age-classes

ASPECT
General aspect

DBCODE
FSDB database code

ELEVATION
Elevation

ENTITY
Entity number

FIRE_COUNT
Number of fires recorded

FIRE_HISTORY
Description of presence of fire, fire scars or origin dates

HABITAT_TYPE
Habitat type, following syntax of Dyrness, Franklin, and Moir (1974)

LENGTH_REC
Length of fire record

RETURN_INT_COMP
Composite mean fire return interval

RETURN_INT_STAND
Stand (or partial stand) replacement mean fire return interval

SITE_NUMBER
Site number

SITECODE
Teensma site codes

UNDERBURN_COUNT
Number of recorded underburns

YEAR
Year of fire history notation from tree ring date
